

# Model EHA

## General

Model EHA is a specific 19-inch rack-mounting server that features two important properties:

- Space saving - 4 servers in a single 1U housing;
- energy efficient - reduced running costs.

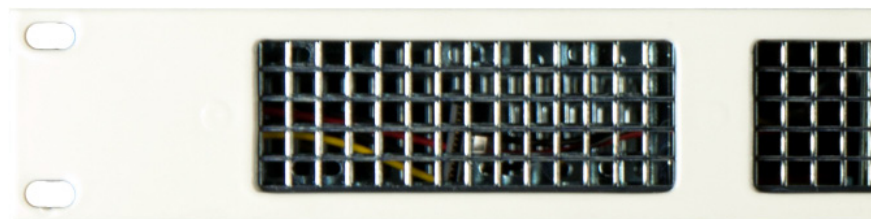

## Specific properties

Ecoserver Model EHA is a 1U 19-inch server which was developed in close partnership with a number of prominent hosting companies. Ecoserver model EHA meets all contemporary hosting requirements. Practice shows that use of a ECOServer EHA provides a minimum saving on energy costs of 400 euros per year, over and above the saving on rental costs as less rack space is required. The unique configuration of four discrete hardware servers in a single 1U chassis offers absolute choice of operating methods, with either independent applications, mutual redundancy or mini-cloud set-ups equally well served.

## Target group

The EHA is ideal for numerous applications, such as:

- Hosting server;
- application server;
- FTP server;
- dedicated server;
- DNS server;
- static storage.
