

the new standard
in server technology

Model EIP

General

Model EIP is a universal 4U-high 19-inch server that combines four properties:

- energy efficient, only 45W;
- compact, depth only 40 cm;
- low noise level;
- maximum of 7 PCI slots.

Specific properties

Model EIP is a server that is developed especially for the high-end security market. Since PoE solutions are increasingly popular, this is a standalone solution with an integrated PoE switch inside the server. Model EIP can be configured as a DHCP server so that all of the cameras will get an IP address automatically. All the PoE ports are 15.4 Watt. Model EIP also has space for an additional PCI or PCI-Express card, so you can place an extra network card, video card or even a frame-grabber card so as to make a hybrid server. Model EIP can mount up to 6 hard drives internally.

Target group

Model EIP is ideal for high end security projects, combined with a UPS you can create a mains-power independent solution.
